Centient

Train AI, cent by cent.

GROWTH RESEARCH · DEMAND SIDE

Campaign design partners

Which small AI companies to approach first to fund Centient's first campaigns and become its first campaign customers, with a scored shortlist, a first cohort and an outreach plan. Bigger organisations come later.

Facts about other companies are from public reporting; verify each and find a real contact before outreach.

RESEARCHED	FOCUS	CANDIDATES	FIRST COHORT
7 October 2026	Small companies first	11 scored	5 partners

SUMMARY

Small AI companies first

Which AI startups to approach so they fund Centient's first campaigns and become its first campaign customers. Small means roughly 50 people or fewer, pre-seed to Series A, where a founder can say yes. On testnet, Centient can fund those campaigns itself.

11
small companies scored
8 Filipino-language AI, 3 Stellar builders

5
in the first cohort
plus 6 alternates

6,600
answers in the first cohort
about 3–4 days of Season 1 supply

0.20
USDC per answer at mainnet
with today's default reward and fee

Small companies decide in days
The founder is the buyer, feels the evaluation problem directly, can't afford Scale or Surge, and values a free dataset. They become the case studies that win bigger customers later.

A data grant costs no real money
Campaign balances on testnet are test USDC. The partner gets a human preference dataset for free; Centient gets real tasks, feedback, a case study and a letter of intent.

Start with Filipino-language AI products
That's where global models are weakest (best FilBench score 72.23%; best Southeast Asian model 61.07%), and where Centient's crowd is strongest.

Bigger organisations come later
Kollab (Senti AI), Thinking Machines, AI Singapore, Cohere, Sarvam, Sentient, Nous Research, Prime Intellect and Arena, once there are case studies to show.

Why small first

	SMALL COMPANY	BIG ORGANISATION
Who decides	The founder, often on the first call	A procurement and security review
Time to a yes	Days to weeks	Months
Why they care	Evaluation is a daily pain and they can't hire a data vendor	They already have vendors and in-house teams
What a free dataset means	A real gift	A rounding error
What Centient gets	Fast feedback, a named case study, a likely paid pilot	Credibility, much later

Inbound lead to act on now: LTP's AI and Cybersecurity Event for employees, Thursday 22 October 2026. Not a first-cohort partner, but its agenda (human validation, trusted data, responsible AI) is what Centient does. See §7.

1 · THE OFFER

Two ways to fund a first campaign

The data grant, step by step

Partner sends pairs
Up to 1,000 prompt and response pairs, free of personal data

Centient funds it
A testnet campaign paid in test USDC: no real cost beyond tester incentives

Contributors judge
Three judgments a pair, with reasons; quality checks, spam, repetition and bias guards

Dataset delivered
JSON, CSV or text with train, validation and test splits, plus a quality report

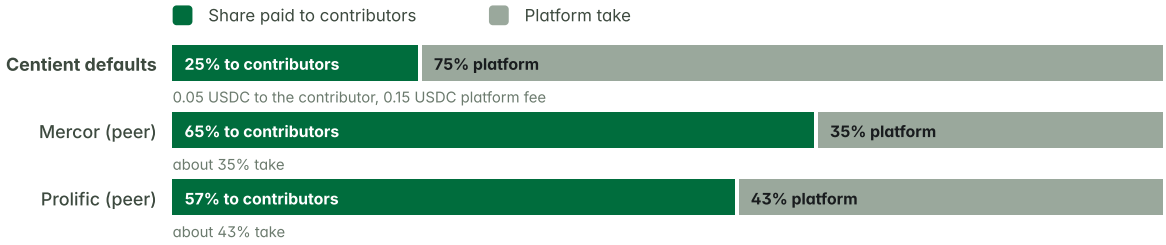

Partner gives back
A feedback call, a case study, a letter of intent

Paid mainnet pilot
Prepaid USDC campaign at production scale

	A. DATA GRANT (CENTIENT FUNDS)	B. PAID PILOT (THE PARTNER FUNDS)
When	Now, on testnet	At mainnet
Contributors are paid by	Centient, in test USDC from the campaign balance	The partner, in USDC, prepaid into the campaign
Partner gives	Pairs free of personal data, a feedback call, permission to be named, a letter of intent	Prepaid USDC
Partner gets	Choices, reasons and timestamps; per-pair agreement; pool accuracy; aggregate demographics only	The same, at production scale
Centient gets	Real tasks for testers, a named first customer, product feedback	Revenue

Pricing: a question to settle before quoting a pilot

Share of each customer dollar that reaches contributors, Centient's defaults against peers named in the pitch deck

With today's defaults a customer pays 0.05 USDC reward + 0.15 USDC platform fee = 0.20 USDC an answer: 600 USDC for 1,000 pairs × 3. That's cheap for a small company's budget, but the platform keeps 75% while the pitch leans on fair pay. One option is pricing by quality tier.

2 · SCORING

Eleven small companies, five criteria

Every candidate passed the small-company filter first. Fit: text preference data in Filipino, Taglish or English that suits the task. Need: building or evaluating AI answers now. Access: a warm path exists. Speed: can say yes in days. Value: a good case study, an SCF story, or a channel.

CANDIDATE	FIT	NEED	ACCESS	SPEED	VALUE	TOTAL OF 25
FILIPINO-LANGUAGE AI PRODUCTS						
Anycase.ai First cohort	4	5	4	5	4	22
Proto First cohort	5	4	3	4	5	21
GradeChum First cohort	4	4	4	4	4	20
Educato First cohort	4	4	3	5	4	20
KARTILYA.PH	4	4	3	4	3	18
Lex Pilipinas (LexAI)	4	4	3	4	3	18
AregLaw.ai	4	4	3	4	3	18
EDGE Tutor	3	3	3	4	3	16
STELLAR-ECOSYSTEM AI BUILDERS						
StellarGPT First cohort	3	3	5	5	4	20
StroopyAI	3	2	5	5	4	19
Stellar AI Agent Kit	2	3	5	5	4	19

Score 1 to 5. Scores are judgment calls from public information, meant to order outreach, not to rank the companies.

Where to start

The same scores folded into two questions: how valuable is the data to them, and how easy is the deal to land?

3 · THE CANDIDATES

Who they are and why they need Centient

Anycase.ai — Filipino-language AI

WHO THEY ARE

Philippine legal research AI. Co-founders Beato Bongco (CEO, formerly Document AI technical lead at Thinking Machines) and Gio Tiongson. A “Legal Intelligence Layer” of Philippine legal materials and an AI Answer system. The only Philippine startup at OpenAI Founder Day in Singapore.

WHY THEY NEED CENTIENT

Its pitch is reliable legal answers. “Which answer explains the law more clearly and stays true to its sources?” suits a law-student expert track.

Proto (proto.cx) — Filipino-language AI

WHO THEY ARE

AI customer-experience platform for emerging markets: about 35 people, about $8M raised ($5.6M Series A, 2024). Tagalog voice AI launched May 2025. Deployed with the DTI, government agencies, eTap, Manila Express and GoodTech chat banking.

WHY THEY NEED CENTIENT

Its assistants answer Filipinos in Tagalog and Taglish about money and government services: exactly Centient's task, and the shape of the bank-ph question bank.

GradeChum — Filipino-language AI

WHO THEY ARE

AI grading of handwritten and digital assessments, tuned for Filipino scripts. ₱15M seed, DOST-TAPI backed, at GITEX AI Asia 2026.

WHY THEY NEED CENTIENT

“Which feedback helps the student more?” suits an education expert track.

Educato — Filipino-language AI

WHO THEY ARE

YC-backed exam prep by three former Palantir AI engineers, covering medicine, law, engineering, high school and civil service exams, the Philippines included. Reports 10 exams live and 5,000+ students.

WHY THEY NEED CENTIENT

AI-written explanations need checking. “Which explanation would help you pass?” is a judgment millions of Filipino exam-takers can make.

Philippine legal AI: KARTILYA.PH · Lex Pilipinas · AregLaw.ai — Filipino-language AI

WHO THEY ARE

KARTILYA.PH: a free AI archive of Philippine law that answers everyday questions and checks citations. Lex Pilipinas (LexAI, Makati, 2024): research, digests, drafting. AregLaw.ai (Tacloban, 2025): citation-backed research and drafting.

WHY THEY NEED CENTIENT

Alternates to Anycase.ai. KARTILYA.PH's plain-language answers can be judged by the whole crowd, not only law students.

EDGE Tutor — Filipino-language AI

WHO THEY ARE

Philippine online tutoring company: $1M pre-Series A (2025) after an $800K seed, investing in AI for teacher training, QC, curriculum and lesson delivery.

WHY THEY NEED CENTIENT

AI lesson content and feedback can be judged A/B, but its AI work is earlier than the others'. An alternate.

StellarGPT · StroopyAI · Stellar AI Agent Kit — Stellar builder

WHO THEY ARE

SCF-funded Stellar AI: StellarGPT ($25K, multilingual answers over Stellar docs), StroopyAI ($21.4K, Stellar assistant chatbot), the Agent Kit ($108K, a one-person team letting AI agents use Stellar over MCP).

WHY THEY NEED CENTIENT

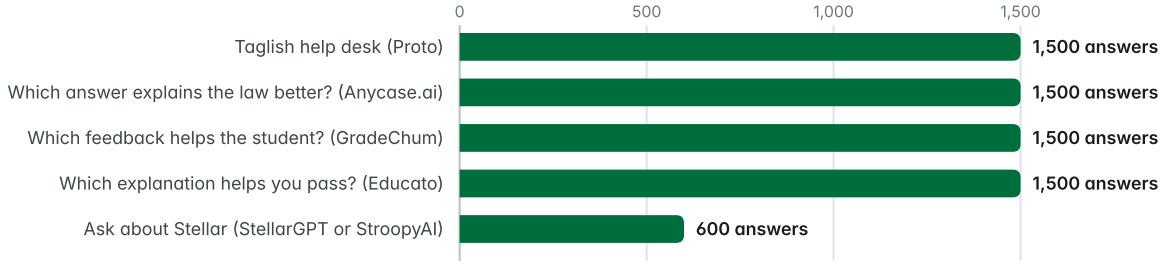

Reachable through the SCF community, a fast yes, and an SCF story. StellarGPT's non-English answers need native-speaker checks; Filipino is a natural first.

Five small companies to start with

#	PARTNER	FIRST CAMPAIGN	SIZE	CONTRIBUTORS
1	**Proto**	**Taglish help desk:** a banking or government-service message, two candidate replies, "Which reply would you trust, and why?"	500 × 3	Everyone; Taglish badge track
2	**Anycase.ai**	**Which answer explains the law better?** A legal question with two AI answers, judged for clarity and for staying true to the cited source. Not legal advice	300 × 5	Law-student expert track
3	**GradeChum**	**Which feedback helps the student?** A student answer with two AI-written feedback variants	300 × 5	Education expert track
4	**Educato**	**Which explanation would help you pass?** A Philippine civil service exam question with two AI-written explanations	500 × 3	Everyone
5	**StellarGPT or StroopyAI**	**Ask about Stellar:** a Stellar question with two assistant answers	200 × 3	Everyone; learn Stellar too

Answers per first-cohort campaign

Pairs × judgments; 6,600 answers in total

At Season 1's target of 1,800 answers a day, the cohort is three to four days of supply, so the evergreen platform pool still carries most days. Use partner campaigns for themed weeks and daily drops: they're the work testers care most about.

Alternates: KARTILYA.PH (plain-language legal answers suit the whole crowd), Lex Pilipinas, AregLaw.ai, EDGE Tutor, the Stellar AI Agent Kit.

Allies, not customers: the FilBench researchers and DOST-ASTI (a public-good Filipino evaluation as Taglish week's community quest) and Hugging Face's Data is Better Together (a Filipino or Cebuano sprint).

5 · OUTREACH

From one-pager to letters of intent

WEEK 1
Prepare
One-pager, a live demo from the bank-ph question bank, verified contacts

Done when: One-pager approved

WEEKS 2–3
Reach out
First messages to the 11 small companies, warm paths first

Done when: 11 sent

WEEKS 3–5
Founder calls
Each partner sends 20 pairs, answered on testnet within 48 h

Done when: 5 calls, 3 agreed

WEEKS 6–9
Load
Content checked, campaigns loaded, Season 0 runs the first one

Done when: 2–3 loaded

SEASON 1
Run
Partner campaigns drive themed weeks and daily drops

Done when: Datasets delivered

SEASON 1 END
Convert
Case studies, quality reports, letters of intent

Done when: 2 LOIs for paid pilots

Warm paths

- **DOST-TAPI:** backs GradeChum and the GITEX AI Asia cohort.
- **Stellar:** StellarGPT, StroopyAI and the Agent Kit are SCF-funded; reach them through the SCF community, the Instawards chapter lead and SCF 7.0 referrals.
- **Founders' networks:** Anycase.ai's CEO worked at Thinking Machines; Educato is in the YC network and hiring in the Philippines.
- **Law schools and education programmes:** the same students who join the expert tracks.
- **Cold:** Proto, KARTILYA.PH, Lex Pilipinas, AregLaw.ai, EDGE Tutor.

What to build for partners

- **Quality report export:** agreement distribution, pool accuracy, blocked-answer rate, aggregate demographics.
- **Content checklist at upload:** no personal data, rights to show the content, a content-warning flag.
- **Partner preview:** a read-only link to sample results before export.
- **Law and education expert tracks:** the tier qualification step, needed by the Anycase.ai and GradeChum campaigns.

The first message

SUBJECT · Free Filipino human-preference data for [product]

Hi [name],

I build Centient, a platform where people in the Philippines compare two AI responses, pick the better one and write a short reason. Each answer is paid on Stellar, and every payment is public.

We're choosing five small teams for free first campaigns. You send up to 1,000 prompt and response pairs, and you get back three judgments per pair with written reasons, agreement scores and a quality report, in about two weeks.

[Product] answers people in Taglish, which is where models are weakest: the best model scores 72% on FilBench. Could I show you 20 of your own pairs answered by our contributors this week?

Carl Macabales, Centient (centient.work)

6 · LATER

Bigger organisations, once there are case studies

ORGANISATION	WHY LATER
Kollab (Senti AI)	A cloud services firm that acquired Senti AI in September 2025. Strong Tagalog and Bisaya fit, but an enterprise sale
Thinking Machines (now Temus)	Acquired in 2026; an OpenAI partner with 110+ enterprise clients. A channel to banks and retailers, not a startup buyer
AI Singapore (SEA-LION)	A national programme with long cycles. Worth it once a Filipino evaluation set exists
Cohere Labs · Sarvam AI	Large labs; Sarvam is also outside the Philippines (pitch deck phase 2)
Sentient · Nous Research · Prime Intellect · Arena	Well-funded labs and platforms ($50M–$150M rounds). Sentient's near-identical name is a scam risk to manage either way
Sanas · Philippine enterprise CX	Need audio tasks or enterprise sales, which Centient doesn't offer yet

The one-pager, competitors and funding

The one-pager

1. **Offer:** a free preference dataset in Filipino, Taglish or English from verified contributors in the Philippines.
2. **Task:** one prompt, two responses, one choice, one reason, with a real example.
3. **Quality:** hidden checks on 10% of tasks, agreement scores, spam, repetition and bias guards, accuracy-gated tiers.
4. **Transparency:** every contributor payment is a public Stellar transaction.
5. **Deliverables:** JSON or CSV with splits, plus a quality report.
6. **Ask:** feedback, a case study, a decision on a paid pilot.
7. **Testnet note:** contributors earn test USDC now; mainnet comes in 2027.

Who funds the incentive budget

The plan's incentive values are TBD. Once set, possible sources:

- Stellar Community Fund Build and Integration awards, via SCF 7.0 referrals.
- Instawards follow-on support from the Philippines chapter.
- Sponsors in kind: telcos for load, anchors or exchanges for prizes.
- Design partners: a paid pilot can carry a contributor bonus pool.

Competitors to watch

WHO	WHAT	CENTIENT'S ANSWER
YGG 3.0 · GIG Rewards	Load for AI quests, including rating AI responses; AI Alerts job board	Dollars per answer on a public ledger; list on AI Alerts for reach
Sapien	Gamified, points-based labelling; $5M raised	Real USDC, no token, a quality report on every campaign

7 · INBOUND LEAD

LTP's AI and Cybersecurity Event

LTP's Digital Transformation Office (contact on file) shared its plans for an employee event on Thursday 22 October 2026. LTP's full name and size weren't found in public sources; fill them in from the conversation.

22 Oct
Event day (Thursday)
AI and cybersecurity awareness

15
days to prepare
from 7 October

9
topics in the AI session
"Working Smarter with AI"

5 of 9
topics where Centient fits strongly
human validation is the core

What LTP is planning

- **Two focus areas:** AI awareness and responsible adoption; cybersecurity awareness for employees.
- **The AI session:** *AI & Microsoft 365 Copilot: Working Smarter with AI*.
- **The objective:** practical and awareness-focused, showing AI's opportunities at work while emphasising responsible and secure adoption.

Where it sits in this plan

LTP is a bigger organisation, so under "small companies first" it is **not a first-cohort campaign partner**. It is an inbound, warm relationship, a stage in front of employees about to use AI at work, and a later enterprise lead: teams rolling out Copilot need people to check AI output, which is human validation at work.

How Centient's work maps to LTP's agenda

#	LTP'S AI TOPIC	CENTIENT'S ANGLE	FIT
1	**How AI is changing the workplace**	Context only	●○○ Some
2	**Practical examples of AI use cases**	Real side-by-side comparisons of AI answers to workplace tasks	●○○ Some
3	**Introduction to Microsoft Copilot**	Not Centient's expertise: LTP's IT team or Microsoft partner	○○○ Leave to others
4	**What AI can and cannot do**	Live pairs where one answer is confidently wrong, built like Centient's hidden checks	●●○ **Strong**
5	**AI + Data: why trusted data matters**	Centient produces trusted, human-judged data: checks, agreement, reasons	●●○ **Strong**
6	**Data confidentiality, what not to put into AI**	Centient's own rule: no personal data in tasks, as a never-paste list	●○○ Some
7	**Human validation and accountability**	The core of Centient: people check AI and say why	●●● **Strongest**
8	**Responsible AI**	Fair, visible pay for the people who check AI; transparency	●●○ **Strong**
9	**What to know before using AI for work**	A one-page checklist employees keep	●●○ **Strong**

Cybersecurity tie-in. AI makes scams more convincing. Lookalike names and fake giveaways are a live example: Centient and "Sentient" differ by one letter, and Sentient has a token and has run airdrops. The lesson for any employee: no real service asks for your password, one-time code or recovery phrase.

7 · INBOUND LEAD

What to offer LTP

A short, practical segment and a hands-on activity. Centient itself gets one closing slide.

Where Centient fits in the AI session

LTP's AI session: Copilot introduction and use cases	Human validation in practice	Which answer?	Q&A
LTP's IT team or Microsoft partner	Centient · 15 min	Centient · 10-min activity	Together

Proposed shape of the AI session; lengths to confirm with LTP

The activity: "Which answer would you trust?"

Five invented workplace pairs, no LTP data

1 · Show A task and two AI answers › **2 · Vote** Hands or a quick poll › **3 · Reveal** Which was better, and why › **4 · Lesson** One rule to keep

- An email summary with a wrong date
- A policy answer that invents a rule
- A spreadsheet formula explanation
- A meeting recap that leaks confidential details
- A Taglish customer reply

Run it from slides or a simple poll. The plan's interactive sample task isn't built yet, so don't depend on it for 22 October.

Example slide

Illustrative, invented content

"Summarise this email for me."

ANSWER A
The vendor will deliver on **Friday 16 October**. No action needed.

ANSWER B
The vendor will deliver on **Monday 19 October** and needs a signed PO by Thursday.

Answer B. A got the date wrong and dropped the action item, and it sounded just as confident. *Lesson: check dates, names and numbers before you send.*

The offer

1. **15-minute segment**, "Human validation in practice", covering topics 4, 5, 7, 8 and 9.
2. **10-minute activity**, "Which answer would you trust?"
3. **One-page takeaway**, "Before you use AI for work", nine points mapped to LTP's topics.
4. **One closing slide** about Centient. No crypto or testnet talk in the main content, and no recruiting LTP employees as paid contributors at their own event.

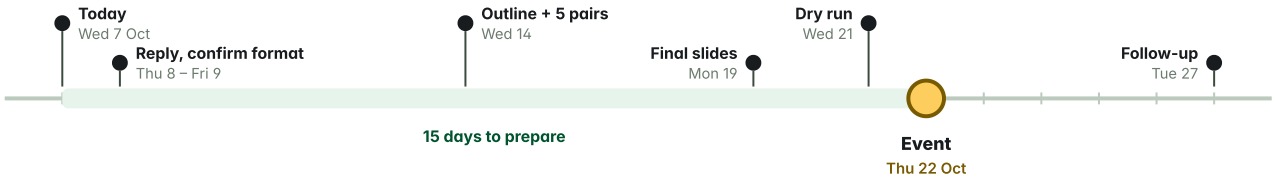

In return, ask for

- A mention as session contributor.
- Permission to describe the session publicly as a responsible-AI education case.
- A follow-up conversation about human review of AI output in LTP's own AI rollout.

Questions for LTP

- Session length, and Centient's share of it?
- Audience size and roles; on-site, online or hybrid?
- Is Copilot already deployed?
- An internal AI-use or confidentiality policy to match?
- Speaker requirements: accreditation, NDA, recording, branding?

Preparation timeline

VERIFICATION AND SOURCES

Check before outreach

No contact names are invented in this brief beyond founders named in public reporting.

Verification

- Funding figures come from news and database summaries. Sources disagree on Proto's size (35 vs 101–500 people); funding totals agree.
- Anycase.ai's funding isn't public in the sources found.
- Lex Pilipinas and AregLaw.ai details come from Stanford's legal tech index; KARTILYA.PH from press.
- Educato's student and exam counts are the company's own.
- SCF award amounts come from SCF project pages; check each project is still active.
- LTP's event details come from its Digital Transformation Office's message to Centient; LTP's full name wasn't found in public sources.
