Centient

Train AI, cent by cent.

GROWTH PLAN · PROPOSAL

Contributor onboarding and gamification plan

How Centient turns first-time visitors into contributors who come back every day and do careful work, with honest incentives for testnet testers.

Test USDC has no cash value. Nothing in this plan presents it as money, and Centient has no token.

STATUS	NETWORK	DATE	SEASON 1
Proposal	Stellar testnet	7 October 2026	11 Jan – 21 Feb 2027

SUMMARY

The plan on one page

Goal: contributors who come back every day and do careful work, measured as **Daily Quality Contributors (DQC)**.

120
Daily Quality Contributors
average in Season 1's final week (floor 60)

400
Activated contributors
Season 1, from 25 wallets today

≥ 25%
Day-7 retention
the "good" band for apps

₱187k
Season 1 incentives
about $3,200, six weeks

1 Value before effort

A sample task on the landing page, a setup checklist, Android sign-in tested, and demographics after the third answer. A first paid answer within two minutes of signing in.

2 A small, forgiving habit

A daily goal of 5, 10 or 20 answers, streaks counted in Manila days, streak freezes, and an empty pool that never breaks a streak.

3 A game that rewards accuracy

XP only from accepted answers, weighted by quality-check accuracy and capped daily. Tiers track quality and unlock better work.

4 Social pull

Weekly leagues by nickname, squads of three to eight, referrals that pay once the newcomer proves quality, and community language goals.

5 Honest tester incentives

Founding Contributor status, a tier that carries to mainnet, load for streaks, league prizes, bounties and a fixed mainnet bonus.

6 A daily-use engine

Opt-in web push reminders, a fixed daily drop of new tasks, and guaranteed supply from an evergreen pool and partner campaigns.

7 Seasons

Season 0 (closed) in November, then a six-week public Season 1 from 11 January 2027 with themed weeks and certification.

+ What it needs

Four epics and 16 issues built one at a time on the current stack, plus owner decisions on budget, legal review and the mainnet bonus.

Definition. A DQC is a contributor who, on a Manila calendar day, meets their daily goal (at least five accepted answers) while quality-check accuracy is at least 70%, the same bar as `WITHDRAWAL_MIN_GOLD_RATE`. Raw daily actives would count drive-by visits; raw answer counts would reward grinding.

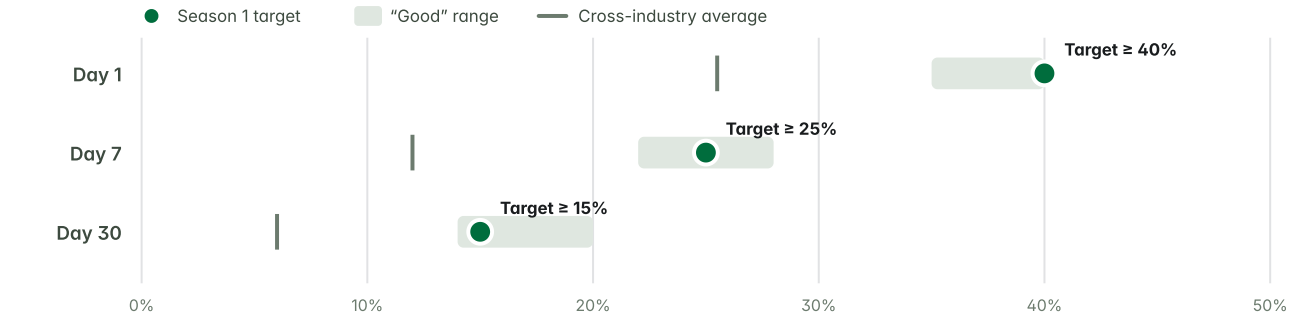

1 · GOAL AND MEASUREMENT

What we measure, and the targets

Nobody measures day-1 or day-7 retention today, so Epic 1 sets the baseline first. Targets sit in the “good” band from published benchmarks.

Season 1 retention targets against benchmarks

Share of new contributors active on day N after their first sign-in

Benchmarks: cross-industry averages and bands, 2025–26 (Sonar, Pushwoosh). Exact values are in the table below.

LAYER	METRIC	DEFINITION	SEASON 1 TARGET
Acquisition	Wallet setup completion	Signed in ÷ started connecting	≥ 60%
Activation	First answer	Accepted answer within 24 h of first sign-in	≥ 70%
Activation	Day-0 goal	New contributors who meet their goal on day one	≥ 40%
Retention	D1 / D7 / D30	Active on day N after first sign-in	≥ 40% / 25% / 15%
Habit	Stickiness	DAU ÷ MAU	≥ 30%
Habit	Streak share	Weekly actives holding a 7+ day streak	≥ 35%
Scale	Activated contributors	At least one accepted answer in the season	400 (floor 200)
Scale	DQC	Daily average, final week	120 (floor 60)
Social	Referred share	New contributors who arrived by invite	≥ 25%
Guardrail	Accuracy	Median quality-check accuracy	≥ 80%
Guardrail	Agreement	Answers matching the majority on resolved tasks	≤ 3-point drop vs Season 0
Guardrail	Blocked answers	Spam, repetition and bias rejections ÷ submissions	≤ 5%
Guardrail	Early pauses	New contributors cooled down in week one	≤ 5%
Cost	Incentive cost per DQC	Season spend ÷ final-week DQC	≤ ₱1,600

If a quality guardrail fails for a week, incentives tied to volume (league prizes, streak load) pause until it recovers.

From first visit to daily habit

Six stages, each with one job for the contributor. The owl guides each stage; it never nags.

STAGE 1 Discover

"Is this real, and can I do it?"

- Try a sample task in the browser, no account
- Receipt shows what an answer pays
- Testnet note on every reward

STAGE 2 Set up

A wallet in under five minutes

- Checklist with progress from step one
- Guides for Chrome, Android, iOS
- Help at campus sessions
- Android QA first

STAGE 3 First answer

A first payment, fast

- Clear-cut welcome tasks
- "Your first payment is on the ledger"
- Pick a daily goal
- Demographics after answer 3

STAGE 4 Learn

Know what "better" means

- First three checks are training checks
- Every miss explains itself
- Tips for writing reasons

STAGE 5 Habit

Come back daily

- Goal ring and streak
- Reminders at a chosen time
- Daily quests, weekly league
- Squads

STAGE 6 Mastery

Grow

- Trusted and Expert tiers unlock better-paid work
- Mentors run squads
- Founding Contributor status

Where value appears

Today, value arrives after seven steps; the redesign shows it first and pays it by step five.

TODAY: VALUE ARRIVES AT STEP 7

Land	Get a wallet (F1)	Sign in (F2)	Payout setup	Demographics (F3)	Landing (F4)	First answer (Value)
Reads the page and a non-interactive walkthrough	Install Freighter, save a recovery phrase	First signature	Second signature	Country and age required	"0.00 USDC", FAQ, one button	Value finally appears

PROPOSED: VALUE AT STEP 1, A PAID ANSWER AT STEP 5

Sample task (Value)	Checklist	Sign in	Payout setup	First answer (Value)	Receipt (Value)	Daily goal
Answer one pair, no account	Guided wallet setup, step 1 of 4	Tested on Android and iOS	Same signature as today	Clear-cut welcome task	Payment on the ledger	5, 10 or 20; profile after answer 3

F1–F4 refer to the friction points in the research brief. The sample task stores nothing and pays nothing, so it asks for less than a wallet signature and keeps "the wallet is the account".

2 · THE JOURNEY

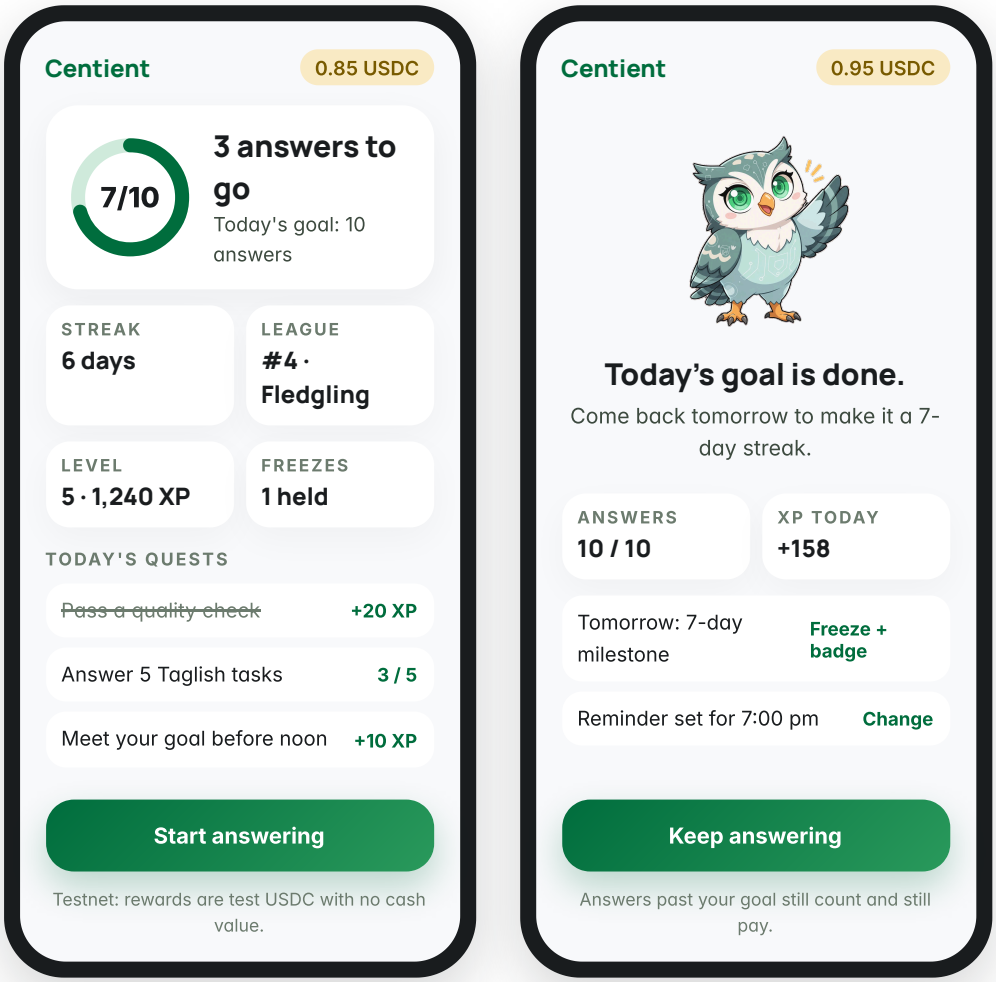

The first 30 days

Each day has something to see and a reason to come back. Gold rings mark the two days with a real reward.

Day 0	Day 1	Day 2	Day 3	Days 4–6	Day 7	Day 14	Day 21	Day 30
Sample task, setup, first answer and receipt, goal met Pull: Opt-in reminder	**Reminder, goal met, streak 2, daily quests** Pull: Quests, streak	**Training checks done, with explanations** Pull: Learning	**Start or join a squad** Pull: Friends	**First weekly league placement** Pull: Rank	**Week one: a freeze, a badge, ₱50 load once Regular** Pull: A real reward	**Halfway to Trusted, first impact summary** Pull: Progress, meaning	**Invitation to an expert track** Pull: Better work	**Month one: badge, ₱200 load, Founding status once Trusted** Pull: Status, a real reward

What the app could look like

Illustrative screens in the current brand: the in-app landing becomes “today”, and meeting the goal gets its own moment.

XP rewards accuracy, never volume

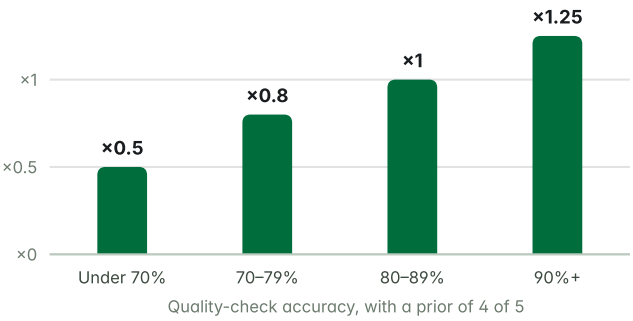

XP is a progress stat. It is not money and not a token: it can't be transferred, traded or cashed out, and it never converts into anything.

EVENT	XP
Accepted answer	10 × multiplier
Passed quality check	15 × multiplier
Failed check or blocked answer	0
Daily goal met	+20, once a day
Daily or weekly quest	+10 to +50
Streak milestone 7 / 14 / 30 / 50 / 100	+100 to +1,000
Invitee reaches Regular	+200 inviter, +100 invitee

Daily cap: XP from answers stops at 400 a day (about 35 answers). Later answers still count toward the goal and still pay.

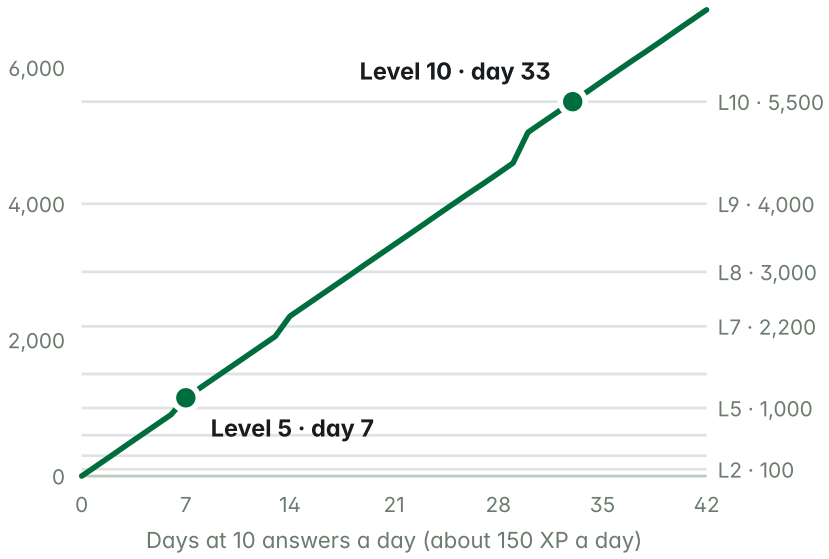

Quality multiplier

Shown to contributors as a band, never an exact percentage

How fast a regular contributor levels up

Cumulative XP at ten answers a day, including the goal bonus, quests and streak milestones; gridlines mark level thresholds

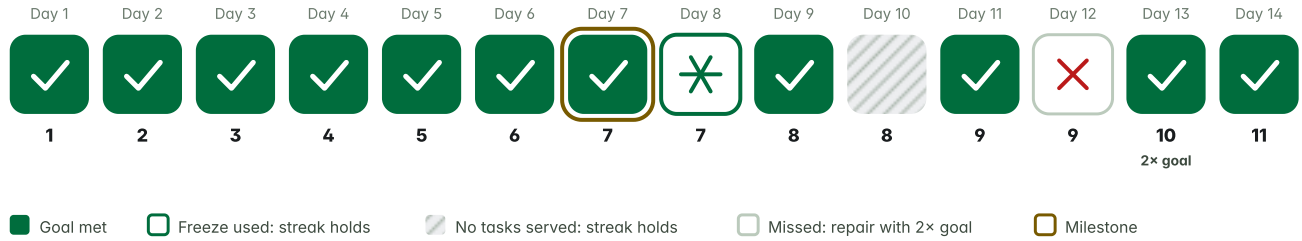

Level 5 arrives on day 7, level 10 on day 33: about one season. Levels never change pay.

A small, forgiving daily habit

Goal: Light (5), Regular (10, the default) or Serious (20). At 30–40 seconds an answer, ten answers is a five-to-seven-minute session. The day is the Asia/Manila calendar day.

Two weeks of one contributor's streak

Numbers under each day show the streak count. Freezes and supply protection hold a streak; a missed day can be repaired once

Freezes: one earned at each 7-day milestone or bought for 200 XP, at most two held (Duolingo saw +0.38% daily actives from allowing two). If Centient had no task to serve, the day can't break a streak: an empty pool is Centient's failure, not the contributor's.

Tiers track quality and unlock better work

A coin flip scores 50% on an A/B check, so every tier gate sits well above chance. Tiers are re-checked weekly, with two weeks' grace before a drop.

Starter
Signed in, wallet bound

Unlocks · Platform tasks, daily goal, XP

Regular
50 accepted answers · accuracy ≥ 70% · account 24 h old

Unlocks · League prizes, referral rewards, streak load, all general campaigns

Trusted
200 answers · accuracy ≥ 85% · 14 active days · no cooldown in 30 days

Unlocks · Higher-reward campaigns, Founding Contributor qualification

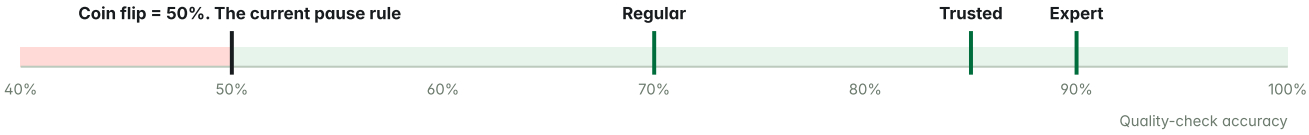

Expert
Trusted + a 20-question qualification at ≥ 90%, per domain or language

Unlocks · Expert campaigns at a higher reward

Mentor
Trusted + operator approval

Unlocks · Run squads and sessions, a season stipend

Where the gates sit

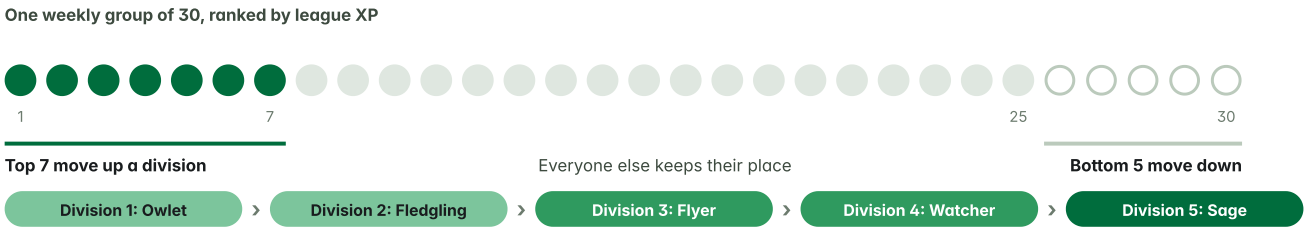

Leagues, quests, badges and squads

Weekly competition by nickname, shared goals, and small groups that keep each other coming back.

Weekly leagues

Monday 00:00 to Sunday 23:59 Manila time; groups of up to 30 in the same division; ties go to higher accuracy

Others see a nickname only, never a wallet address, and anyone can hide from the public board. Division names are suggestions; avoid “Gold”, because gold is reserved for money and a “gold task” already means a hidden check.

Quests

KIND	EXAMPLES	REWARD
Daily, three rotating	Meet your goal · pass a quality check · five tasks in one category · finish before noon	+10 to +30 XP
Weekly	Goal on five days · 20 Taglish tasks · help your squad reach its goal	+50 XP, badge step
Community	25,000 answers from the Philippines this week · get Cebuano to 1,000 answers	Badge for all who took part

Badges

First answer
First accepted answer

On the ledger
First payment confirmed

Week one · Month one
7- and 30-day streaks

Sharp eye
20 checks passed in a row

Taglish voice · Cebuano voice
200 answers in that language

Founding Contributor
Trusted during Season 1

Squads and referrals

- **Squad:** three to eight people; if every member meets their goal on four or more days, each earns a squad badge step and +50 XP.
- **Invite link:** `centient.work/?ref=CODE`, a random code, never a wallet address.
- **Referral reward:** only once the newcomer reaches Regular; then XP for both and ₱25 load for the inviter, capped at ten a month.
- **Why squads:** referred customers churn about 18% more slowly, but only while their referrer stays.

Coaching, not early pauses

1. The first three quality checks come from a separate **training set** and explain the right answer. They don't count toward the pause rule.
2. The pause rule keeps its threshold but starts at the third **hidden** check.
3. Every failed check explains itself, without revealing which future tasks are checks.
4. A weekly “Your impact” summary shows answers, accuracy band, streak and campaigns.

3 · THE GAME SYSTEM

Guardrails against gaming

Every mechanic assumes someone will try to farm it. The guards reuse what already exists and add one check where money changes hands.

RISK	GUARD
Farming XP with low-effort answers	XP for accepted answers only, the quality multiplier, the daily cap, and the existing spam, repetition, rate-limit and bias guards
Many accounts chasing prizes	Prizes need Regular or Trusted, then operator review. **One payout identity per person**: a mobile or GCash number can claim for only one account. ADR-0004 records that one person with many funded wallets isn't detected today
Referral rings	Rewards only at Regular, a monthly cap, review for more than five referrals a week
Coaching leaking the gold set	Training tasks are a separate set
Leaderboard pressure or privacy	Nicknames only, opt-out, no wallet shown
Compulsion and burnout	Daily XP cap, freezes, quiet hours, at most two reminders a day, no guilt-trip copy
Streaks broken by Centient's own supply	Supply protection

4 · TESTER INCENTIVES

The Founding Contributor programme

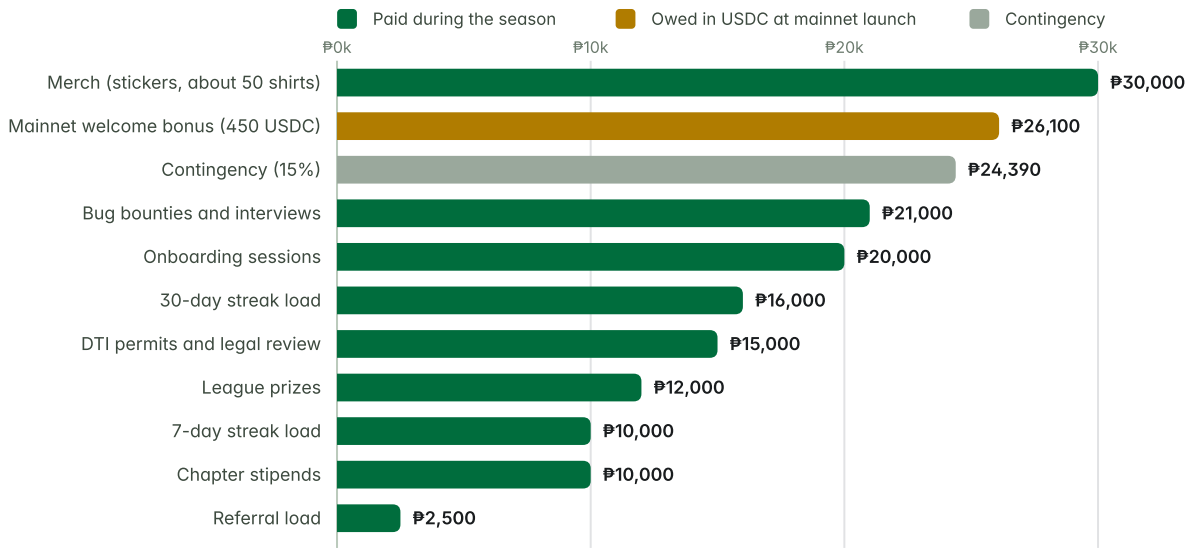

On testnet the product's core promise, getting paid, is deliberately absent. The programme gives testers something real while keeping two rules: never imply test USDC is money, and never promise a token.

INCENTIVE	WHAT IT IS	WHO QUALIFIES	SEASON 1
Founding Contributor status	Permanent badge, profile label, opt-in public list	Trusted in Season 1	Free
Tier carries to mainnet	A Trusted tester starts mainnet with Trusted-only campaigns; a Stellar address is the same on both networks	Every tier	Free
Mainnet welcome bonus	A fixed amount of real USDC, the same for all, e.g. 3 USDC; based on tier, never XP	Trusted at season end	450 USDC
Streak milestone load	₱50 at 7 days, ₱200 at 30 days	Regular	₱26,000
League prizes	₱500 / ₱300 / ₱200 to the top three in each top-division group, weekly	Regular, reviewed	₱12,000
Bug and UX bounties	₱100–₱1,000 per confirmed bug; ₱300 per 30-minute interview	Anyone signed in	₱21,000
Campus chapter stipend	₱2,000 per season per active chapter lead, plus merch	Mentor	₱10,000
Merch and certificate	Owl stickers and shirts; a certificate of contribution for resumes	Founding and top contributors	₱30,000

Not recommended for Season 1: raffles and loot-box rewards. They run on chance, need permits, attract farmers, and sit badly next to paid work.

Season 1 incentive budget, about ₱187,000 (≈ $3,200)

Assumes 400 activated contributors, 120 DQC in the final week, and ₱58 to the US dollar

Subtotal paid during the season: ₱136,500. About ₱1,560 per final-week DQC. Sponsors could cover parts: telcos for load, anchors or exchanges for prizes, SCF or Instawards follow-on funding.

4 · TESTER INCENTIVES

Programme rules

Real rewards follow the same principle as payouts: show the payment.

1 One person, one account

Real rewards need the tier shown, pass operator review in the admin console, and are paid to one payout identity per person.

2 Claim details only at claim time

The mobile or e-wallet number is stored apart from the account, never sent to analytics, and deleted 90 days after payment. Check Data Privacy Act obligations.

3 Published mechanics

Each promotion has a rules page with dates, prizes, eligibility and, where required, the DTI permit number.

4 Every payout is visible

A public, anonymised list (nickname, prize, date) applies "show the payment" to incentives.

5 Fixed budgets

Each reward has a weekly cap, and the programme says plainly that it ends when the budget is spent.

6 What we never do

Imply test USDC is money, call XP a token or convertible, pay for social follows, or run chance-based loot.

5 · The daily-use engine

The loop that brings contributors back

1 Cue

What starts a session

- Reminder at a time the contributor picks
- Daily drop of new tasks at 7 pm
- Streak-saver at 8 pm if the goal is open
- Squad nudges

2 Routine

What they do

- A five-to-ten-minute session
- Ten answers fill the goal ring
- One prompt, two responses, one reason

3 Reward

What they get, right away

- A payment receipt for every answer
- XP and the ring filling
- The streak animation (+1.7% D7 at Duolingo)
- A quest completed

4 Investment

What they build up

- Streak and tier progress
- Squad and league place
- Founding Contributor status
- Makes tomorrow's cue land: back to 1

5 · THE DAILY-USE ENGINE

Reminders and task supply

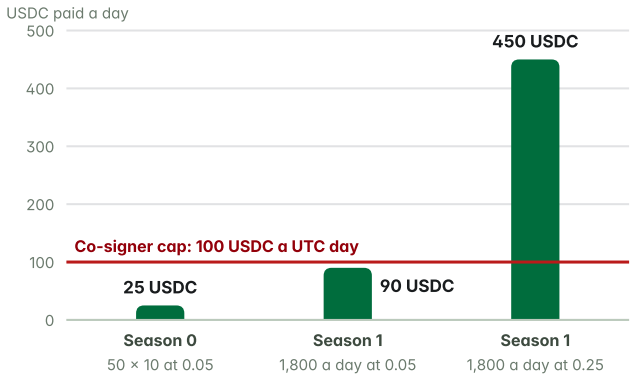

Wallet-first accounts have no email or phone, so the reminder channel has to be opt-in. And a daily habit needs daily tasks.

CHANNEL	REACH	PERSONAL DATA	BUILD COST	ORDER
Web push (PWA)	Android browsers; iOS 16.4+ after Add to Home Screen	Push subscription only	Medium; the manifest already exists	First
Telegram bot and community	Crypto-savvy contributors	Telegram ID	Low to medium	Second
Facebook Messenger	Very widely used in the Philippines	Messenger ID	High: Meta app review	Later
Email opt-in	Lower engagement here; Resend is wired	Email	Low	Optional
SMS	Everyone	Phone number	Per-message cost	Not now

Reminder rules: one daily reminder at the chosen time; a streak-saver at 8 pm only if the goal isn't met and the streak is at least three days; quiet hours 10 pm to 8 am; back off for a week after three ignored reminders; one-tap opt-out.

Payout volume against the daily cap

Testnet USDC paid a day by scenario

Raise DAILY_PAYOUT_CAP_UNITS and COSIGNER_DAILY_CAP_UNITS to 1.5× the forecast before Season 1.

Task supply is the precondition

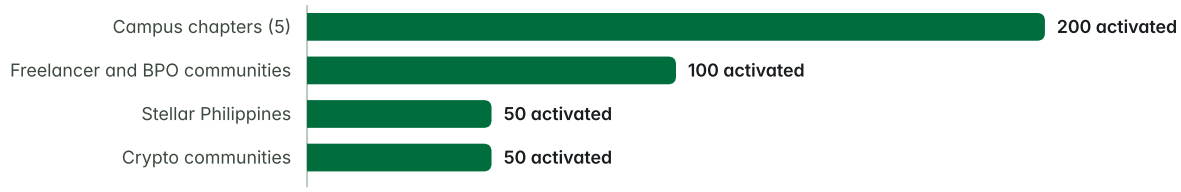

1,800
answers a day
120 DQC × 15

600
new tasks a day
at 3 judgments each

1. **Evergreen pool:** grow the platform bank from 230 rows to 5,000+ reviewed pairs; refresh weekly.
2. **Design-partner campaigns:** real data for real AI teams.
3. **Daily drop** at a fixed time gives the habit its cue.
4. **Daily allocation:** e.g. at most 60 platform tasks per person a day.
5. **Supply protection:** an empty pool never breaks a streak.
6. **Campaign balance:** about 360 test USDC a day (reward plus platform fee).

6 · GROWING THE TESTER BASE

Where Season 1's contributors come from

Plus referrals and squads (target: 25% of new contributors) and a listing on YGG's AI Alerts board, which drew 27,000 applications in five days. Campus sessions solve the hardest step, wallet setup, in person.

> **YGG and GIG Rewards.** GIG already pays Smart and TNT load for AI quests, including rating AI responses. List on AI Alerts now for reach; consider GIG quests only on clear terms; on mainnet, compete on dollars paid per answer on a public ledger.

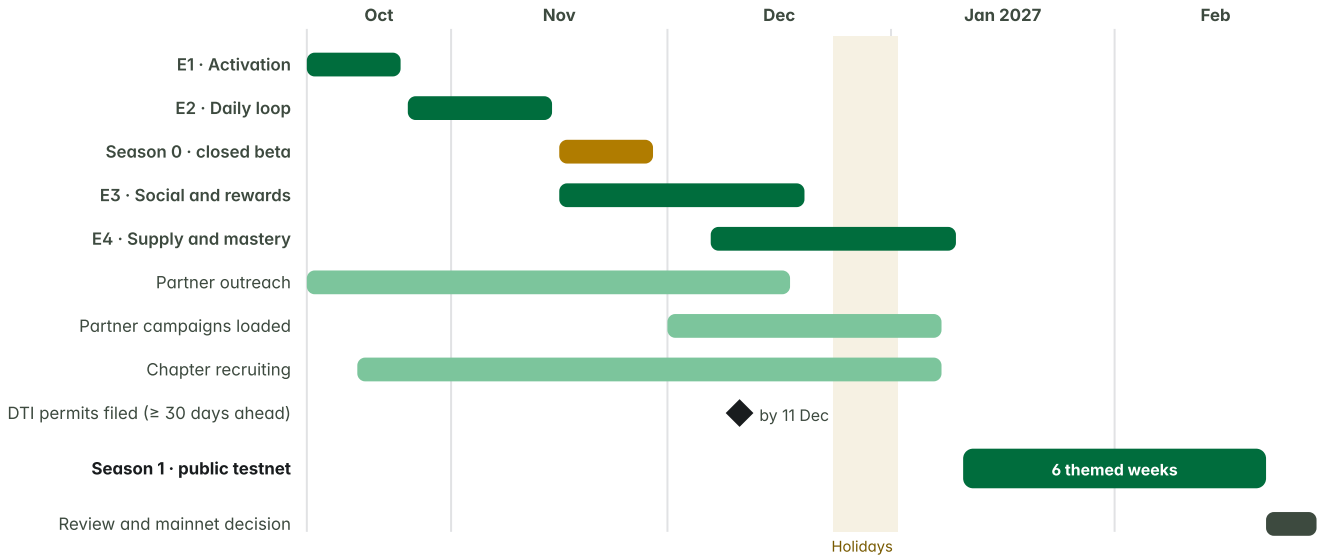

7 · SEASONS

Calendar

Season 0 (closed, about 50 testers) validates the loop and sets the baseline. Season 1 starts after the holidays, with classes back.

From build to Season 1

Proposed dates; development is manual with one issue in flight

Season 1, 11 January – 21 February 2027

WEEK 1	WEEK 2	WEEK 3	WEEK 4	WEEK 5	WEEK 6
Learn the ropes Training checks, the push to Regular	**Taglish week** Community quest on Taglish answers	**Squad week** Squad goals, the referral push	**Expert week** Filipino writing, education, coding	**Quality week** Accuracy weighted extra in leagues	**Finale** Founding Contributor lock, certificates

8 · BUILD PLAN

Four epics, sixteen issues

Each epic ships behind feature flags and passes one QA gate. Issues needed for Season 0 come first.

E1
Activation

- **#1** Funnel analytics and dashboards — Needed for Season 0
- **#2** Try a sample task — Needed for Season 0
- **#3** Wallet setup guide and Android QA — Needed for Season 0
- **#4** Demographics after answer 3 — Needed for Season 0
- **#5** Beginner-safe quality (ADR) — Needed for Season 0

E2
Daily loop

- **#6** Progress model and XP ledger — Needed for Season 0
- **#7** Daily goal, streak, freezes, supply protection — Needed for Season 0
- **#8** Levels and first badges — Needed for Season 0
- **#9** Web push reminders and daily drop — Needed for Season 0

E3
Social and rewards

- **#10** Nicknames and weekly leagues — Needed for Season 1
- **#11** Referrals and squads — Needed for Season 1
- **#12** Reward grants, approval queue, claims — Needed for Season 1
- **#13** Daily, weekly and community quests — Needed for Season 1

E4
Supply and mastery

- **#14** Evergreen pool, daily drop, allocation — Needed for Season 1
- **#15** Tiers and expert qualifications — Needed for During Season 1
- **#16** Seasons, certificate, impact report — Needed for Season 1, week 6

Where it touches the code

AREA	CHANGE
`app/api/submit`	Award XP keyed `answer:<submissionId>`; update daily activity, goal and streak in the same transaction
`app/api/task`	Training checks first, daily allocation, record when nothing was served
`lib/admin-data.ts`	`evaluateBanRule` counts hidden checks only
`app/page.tsx`	Goal ring in the task header; goal picker and goal-met screens; profile after answer 3
`app/api/cron`	Streak rollover at Manila midnight, weekly leagues, reminders
Admin console	Rewards approval queue; progress on the user profile

New data (sketch)

MODEL	HOLDS
ContributorProgress	Goal, XP, level, tier, streak, freezes, nickname, referral code, squad
XpEvent	Append-only awards, idempotent by `sourceKey`
DailyActivity	Per Manila day: answers, checks, XP, goal met, served-empty, protected-by
RewardGrant	Real incentives; never paid without operator approval
Also	UserBadge, LeagueMembership, Squad, claim details kept apart; `Task.isTraining`, `Task.explanation`, `Campaign.minTier`

ADRs to write

- XP is a progress stat, not money.
- Real incentives sit off the task-payout rail and need operator approval.
- Training checks are separate; the pause rule reads hidden checks only (amends ADR-0004's gold scoring row).
- The contributor day is the Asia/Manila calendar day.

9 · EXPERIMENTS

What to test, and how to read it

With a few hundred contributors, small effects won't reach significance. Treat results as directional and roll changes out in sequence.

#	HYPOTHESIS	VARIANT VS CONTROL	PRIMARY METRIC	GUARDRAIL
X-1	Trying a task first raises setup completion	Interactive sample vs walkthrough	Wallet setup completion	—
X-2	Later demographics raise first answers	After answer 3 vs before answer 1	First answer in 24 h	Profile completion ≥ 80% of control
X-3	Choosing a goal beats a default	Goal picker vs fixed 10	D7 retention	Answers per active day
X-4	Freezes protect habits	Freeze at day 7 vs none	D14 retention	Accuracy
X-5	A chosen reminder time beats a fixed one	Picker vs 7 pm	D7 retention	Opt-out rate
X-6	Prizes add to leagues	With prizes vs without	Active days a week	Accuracy, cost per DQC
X-7	Load adds to referral XP	₱25 + XP vs XP only	Referrals reaching Regular	Referral flags

10 · RISKS

What could go wrong

RISK	MITIGATION
Farming and Sybil accounts	Tier gates, one payout identity per person, operator review, caps
Quality falls as volume rises	Guardrail metrics; volume incentives pause if median accuracy drops below 75%
Testers mistake test USDC for money	A testnet note on every reward surface, in the FAQ and in all content
Confusion with “Sentient”	Sentient has a token and has run airdrops. Add: “Centient has no token and will never ask for your recovery phrase.”
Promotions law and tax	DTI permits filed early; counsel checks prize tax and privacy obligations
Task supply falls short	Evergreen pool, partner campaigns, daily allocation, supply protection
Compulsion and burnout	Daily XP cap, freezes, quiet hours, reminder limits
One builder	Strict priorities; Season 1 can start with rewards handled by hand
Android untested · payout cap	QA before Season 0; raise caps and size the float before Season 1

11 · UI COPY

How it should sound

Verbs first, plain words, no emoji, testnet stated plainly. Native speakers write the Filipino versions.

MOMENT	COPY
Sample task done	“That's the whole task. Set up a wallet to get paid for the next one.” *On testnet, rewards are test USDC with no cash value.*
First payment	“Your first payment is on the ledger.” · **View transaction**
Goal picker	“How many answers a day suits you?” · **5, Light** · **10, Regular** · **20, Serious**
Streak-saver reminder	“Ten answers keep your 6-day streak going.”
Supply protection	“No tasks right now, so your streak is safe today.”
Freeze used	“A streak freeze covered yesterday. You have 1 left.”
Failed training check	“Response B was better here: it answers the question that was asked. Checks like this one keep the data useful.”
Tier up	“You're now Trusted. Higher-reward campaigns are open to you.”
Rewards page	“Founding Contributor rewards are real and listed below. Test USDC is not money.”

12 · DECISIONS

What the owner needs to decide

- [ ] **North star and targets:** adopt DQC and the Season 1 targets?
- [ ] **Mainnet promises:** commit to tier carry-over and a fixed welcome bonus? Once announced, both are public promises.
- [ ] **Beginner-safe quality:** accept training checks and the pause rule on hidden checks, as a new ADR.
- [ ] **YGG and GIG:** list on AI Alerts, partner, or stay apart?
- [ ] **Names:** league division names and the nickname policy.
- [ ] **Budget:** approve about ₱187,000, and decide whether to seek sponsors for load and prizes.
- [ ] **Legal:** counsel review of DTI permits, prize tax and Data Privacy Act obligations before anything is announced.
- [ ] **Reminders:** web push first, Telegram second?
- [ ] **Dates:** Season 1 from 11 January 2027, or earlier?
- [ ] **Partner pricing:** see the campaign design partners brief.

Companion documents: Onboarding and daily-use research · Campaign design partners. Source of record: docs/growth/ in the Centient repository. Outside figures are point-in-time; see the research brief's verification list.
