Centient

Train AI, cent by cent.

GROWTH RESEARCH

Onboarding and daily-use research

Where Centient's funnel loses people today, and what habit research, Duolingo, crowdwork, web3 programmes and the Philippine market say about fixing it.

Outside figures are point-in-time; some come from secondary reporting. The verification list is on the last page.

RESEARCHED	NETWORK	MARKET	COMPANION
7 October 2026	Stellar testnet	Philippines	Gamification plan

SUMMARY

What we found

Where Centient's current funnel loses people, and what habit research, Duolingo, crowdwork, web3 programmes and the Philippine market say about fixing it.

~75%
of app users lost within three days
industry pattern

88%
of Filipino phones run Android
StatCounter, June 2026

~30
answers until the first pause check
with 10% quality checks

230
tasks in the platform's own bank
111 + 119 fallback rows

1 The hardest step comes before any value

Install Freighter, save a recovery phrase and sign twice, all before the first task. Apps lose about 75% of users in three days.

2 Phones: tested on iOS, used on Android

Freighter Mobile sign-in passed QA on iOS only, while 88% of Filipino phones run Android.

3 Nothing asks them to come back

No daily goal, streak, progress or reminder, and wallet-first accounts have no email to reach.

4 The quality rule is harsh on beginners

Three checks, under 50%, a 24-hour cooldown, lifetime counters, and no explanation. A day-one break kills a new habit.

5 Testnet removes the motivation

Test USDC has no cash value and the brand forbids implying otherwise. Tester incentives must be real and separate.

6 What works: forgiving habits, rewarded accuracy

Daily goals, forgiving streaks, leagues and squads, with rewards tied to verified quality rather than volume.

7 The local analog exists

YGG's GIG Rewards pays Smart and TNT load for AI quests, including rating AI responses. Demand is proven.

8 A habit needs supply

If the pool runs dry, “You've done them all” becomes a broken streak. Daily mechanics need guaranteed tasks.

1 · THE FUNNEL TODAY

Eight steps, value at step seven

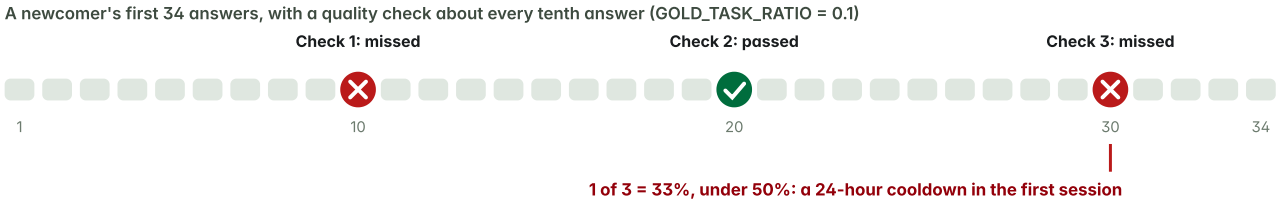

Read from `app/page.tsx` (its `Screen` states) and the components each one renders.

Step · A friction point (see the table on the next page) · Where value finally appears

#	STEP	WHAT THE CONTRIBUTOR DOES	TRACKED TODAY
1	**Land**	Landing page doubles as sign-in; non-interactive walkthrough	`Page view`
2	**Get a wallet**	Install Freighter, create a wallet, save the recovery phrase, outside Centient	`Nothing`
3	**Sign in**	Signs one challenge (SEP-53), on desktop or over WalletConnect	`wallet_connect_failed (failures only)`
4	**Payout setup**	Second signature for the sponsored USDC trustline, or Continue for now	`payout_ready, payout_setup_skipped`
5	**Demographics**	Country and age range required, gender optional, before any task	`onboarding_completed`
6	**In-app landing**	Total earned (0 for a new account), the FAQ and Start Earning	`Nothing`
7	**Answer**	Pick A or B, write a reason of 10+ characters; at most one answer per 15 s	`task_presented, submission_approved, …`
8	**Pool empty**	“You've done them all”, come back later	`Nothing`

When the pause rule first fires

`evaluateBanRule` cools an account down once lifetime gold accuracy is under 50% after three checks, and `computeCooldownBan` escalates repeats. A failed check shows no explanation.

24 hours First cooldown › **72 hours** Second within 30 days › **Permanent** Third within 30 days

Counters are lifetime, so early misses weigh on every later check. And a coin flip scores 50% on an A/B check, so the rule only catches worse-than-random work.

1 · THE FUNNEL TODAY

Nine gaps, ranked by impact on daily use

#	GAP	WHERE IT SHOWS	WHY IT MATTERS	IMPACT
F1	**Value comes after the hardest step**	`Steps 2–4`	A contributor who never answers once never sees the payment that is the product's promise	High
F2	**Mobile sign-in proven on iOS only**	`ADR-0003 amendment, R-6`	88% of Filipino phones run Android; the audience is mobile-first on mid-range phones	High
F3	**Demographics before the first task**	`OnboardingScreen.tsx`	Delays first value with the most sensitive data Centient asks for	Medium
F4	**No goal or next step**	`InAppLanding.tsx`	No target, no sense of progress, no plan for a session	Medium
F5	**No reason, and no channel, to return**	`User model`	Wallet-first accounts carry no email or phone; nothing can send the next cue	High
F6	**Beginners can be paused on day one**	`admin-data.ts, submit route`	The third check lands around answer 30, inside the first session	High
F7	**Testnet removes the core motivation**	`PRODUCT.md`	Testers are volunteers until mainnet; something real must stand in for pay	High
F8	**Task supply is finite**	`docs/campaigns/centient`	200 people × 10 a day needs about 670 new tasks a day at three judgments	High
F9	**A daily payout ceiling**	`COSIGNER_DAILY_CAP_UNITS`	100 USDC a UTC day: 2,000 answers at 0.05 USDC or 400 at 0.25	Medium

2 · HABITS

How habits form

Habits take weeks, and one missed day barely matters

UCL study led by Phillippa Lally: time to near-automaticity among participants whose progress could be modelled

Missing one day lowered automaticity by a very small amount with no lasting effect. Lally stresses 66 days is an average, not a rule. Design implication: a streak can forgive a missed day.

Endowed progress (Nunes and Drèze, 2006)

Two car-wash loyalty cards needing the same eight purchases

10 stamps, 2 already filled

Completed more often

8 stamps, none filled

Same 8 purchases needed

Counting wallet setup as progress (“Step 2 of 4”) uses the same effect.

Goal gradient (Hull, 1934)

Effort rises as a goal gets closer. A visible ring for “answers today against your goal” puts this to work in every session.

Stable context builds the cue

The same time and place each day is what makes a cue trigger the action. A reminder at a time the contributor picks, plus a short fixed session, fits that.

2 · DUOLINGO

The best-documented daily habit app

Effects reported for individual mechanics. They use different units, so they are shown side by side rather than on one axis.

3.6×
more likely to finish a course
after reaching a 7-day streak

+0.38%
daily active learners
allowing two Streak Freezes

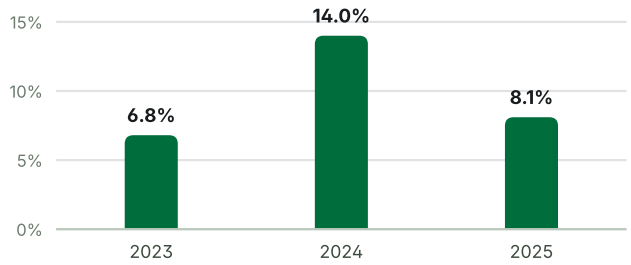

+1.7%
new learners active at day 7
from the streak animation alone

+17%
learning time
from leagues (secondary source)

Overall: daily actives grew about 4.5× over four years to 52.7 million by the end of 2025; one analysis puts churn falling from 47% to 28% (secondary).

Copying a streak isn't enough

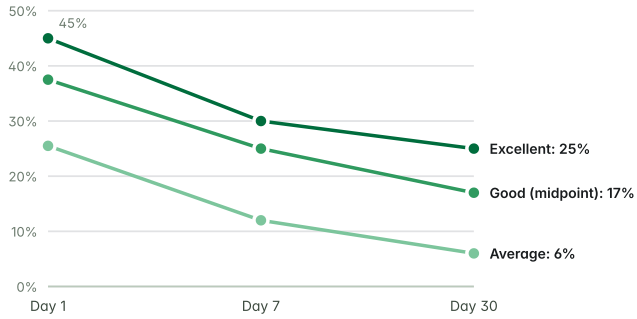

Share of captured apps showing a streak screen

Streaks work when the daily action is short and worth doing for its own sake. Ten paid answers in five to seven minutes fits.

Retention benchmarks, 2025–26

Share of users active on day N

Day 1 measures onboarding, day 7 early habit, day 30 lasting value. Pushwoosh 2025 reports lower figures for push-enabled apps: D7 6.89% iOS, 5.15% Android.

Gamified crowdsourcing

- Points, badges, levels and leaderboards raise participation; effects on quality are mixed and hard to isolate.
- An accuracy-centred "Sharpshooter" badge lifted total accuracy about 1% month over month.
- **Lesson:** reward accuracy, not volume. Centient already measures it: gold checks, agreement, spam, repetition and bias guards.

Web3 quests, points and airdrops

- Galxe, Zealy, Layer3, QuestN: tiers of social, engagement and product actions.
- Points get farmed for months; keeping users after the airdrop is hard; bots complete the easy quests.
- **Lesson:** no token framing; reward only product actions that pass quality; gate real value behind a tier.

3 · THE PHILIPPINES

The market Centient is launching in

#9
Chainalysis 2025 adoption index
peak #2 in 2022

#4
TRM Labs 2025 adoption index
up from #8

~10%
of Filipinos engage with crypto

88%
Android share of phones
June 2026

Who else pays Filipinos for AI work

PLATFORM	WHAT CONTRIBUTORS DO	HOW THEY'RE PAID	WHAT TO LEARN
GIG Rewards (YGG Pilipinas, BreederDAO, ED3N; Smart and TNT)	AI quests: record video and audio, label images, **rate AI responses**	Points for load, up to ₱750 advertised	Load is a familiar, cheap incentive; the demand is proven
YGG AI Alerts	Matched to remote AI training jobs	Via each job	27,000 applications in five days
Remotasks (Scale AI)	Annotation; 10,000+ Filipino workers	Delayed, reduced or withheld pay reported; $10 tasks fell below 1 cent	Trust is the wedge: Fairwork scored it 1 of 10
Sapien	Gamified labelling on mobile	Points with accuracy multipliers	A gamified competitor with enterprise claims
Centient	Compare two AI responses, write a reason	USDC per accepted answer, on a public ledger	“Show the payment, don't promise it”

Promotions are regulated
Raffles, contests, games, premiums and rewards need a DTI sales promotion permit before they start. Lead times quoted range from 15 to 30 days (raffles and competitions: 10 working days). Penalties under RA 7394: ₱500–₱5,000, imprisonment, or both. The Internet Transactions Act of 2023 also applies.

Small real rewards are easy to pay
Xendit disburses to GCash, Maya, Coins, GrabPay and Starpay by API or batch upload of up to 10,000 rows, 7 am to 11 pm every day. Coins.ph and BCRemit already move remittances as USDC or USDT, cashing out to pesos within minutes.

4 · COMMUNITY AND LANGUAGE

Why people come back for each other, and for their language

−18%
slower churn for referred customers
only while the referrer stays

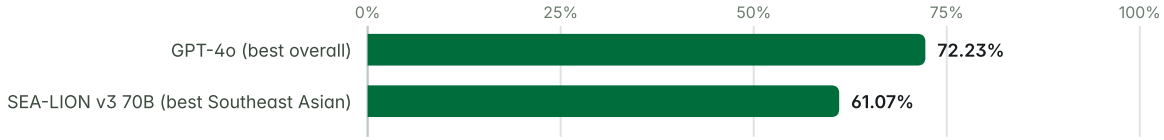

+16%
higher value per referred customer
German bank, ~10,000 customers, 3 years

~3,000
Aya collaborators in 119 countries
204,000 pairs, 65 languages

Hugging Face's FineWeb-C has annotations in 114 languages, includes a language once it reaches 1,000 annotations, and runs language communities on Discord. “Put Filipino on the map” is a motive Centient can use alongside pay.

Filipino is underserved

FilBench score (EMNLP 2025): cultural knowledge, classical NLP, reading comprehension, generation

Generation and reading comprehension were the weak spots. Contributors' Filipino judgments are scarce and valuable, and they can be told so.

5 · PRINCIPLES

Nine design principles for Centient

1 Reward verified quality
XP, rank and real incentives follow accepted answers, weighted by quality. Failed or blocked answers earn nothing.

2 Value before effort
A sample task before the wallet; a first paid answer within minutes of signing in.

3 Small and forgiving
About ten answers a day, freezes, no guilt-trip copy.

4 Plain about testnet
XP is a progress stat, not money or a token. Real incentives are separate and labelled.

5 Social and local
Squads, campus chapters, language goals.

6 Sybil-resistant by construction
Tier gates, existing ban gates, operator review, one payout identity per person at claim.

7 Show every reward
Each payment links to the ledger; each prize is announced with its rules.

8 Never let the pool run dry
Daily mechanics ship only alongside guaranteed daily supply.

9 Keep the brand
Plain words, verbs first, no emoji, gold reserved for money, the owl as guide.

VERIFICATION AND SOURCES

Check these before quoting them outside the team

- Duolingo's churn figures (47% to 28%) and the +17% league effect come from secondary analyses, not Duolingo itself.
- The 52.7 million DAU and 4.5× growth figures are reported by analysts; use Duolingo's investor reports for exact numbers.
- GIG Rewards' “up to ₱750” comes from a Smart post on X; the 27,000 AI Alerts applications from a games-industry news summary.
- DTI filing lead times differ between sources; confirm with DTI or counsel for each promotion.
- App-retention benchmarks vary by vendor and category; treat them as ranges.
